SIMATS ENGINEERING

ASSESSMENT TOOL 1: Short Answer Test

COURSE NAME: Cloud Computing and Big Data Analytics **COURSE CODE:** CSA15

COURSE OUTCOME COVERED

CO1: *Apply cloud computing technologies including hardware-software evolution, virtualization, web services, and service models to develop cloud-based solutions.* (BL2)

Assessment Tool Weightage: 40%

Dave's Taxonomy: Imitation (Level 1) **Total Marks: 25**

Question Count: 5

SHORT ANSWER TEST

Code of Conduct

I SATHYAM SHARMA L (192526028 2) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student: L Sathyam

Assessment Tasks

Short Answer Test

1. Define cloud computing and explain any four characteristics that make it different from traditional on-premise computing.
2. Trace the evolution of cloud computing from hardware evolution to internet software evolution, and show how these changes enabled modern cloud platforms.
3. Explain the role of server virtualization in cloud computing. Differentiate between virtualization as an enabling technology and cloud computing as a service model.
4. Discuss the role of **data centers** in delivering cloud services.
5. Differentiate IaaS, PaaS, SaaS, and XaaS with one suitable real-world example for each model.

TEST QUENSTIONS
CO-1 AT-3

CODE: CSA1519

1. Define cloud computing and explain any four characteristic that make it different from traditional on-Premise computing.
2. Trace the evolution of cloud computing from hardware evolution to interest software evolution.
3. Explain the role of server virtualization in cloud computing. Differ btwn virtualizati and cloud computing
4. Discuss the role of data centers in delivering cloud services
5. Differentiate Iaas, Paas, saas, and xaas with one suitable real world.

CO-1 - AT-3
ANSWERS

CLOUD COMPUTING AND DATA ANALYSIS
CSA1519

1 CLOUD COMPUTING :-
cloud computing is the delivery of the computing resources such as servers, storage, databases, networks and software over the internet

on-demand self-services :-
users can get computing resource whenever they need them

Broad network Acass :-
Accessible through mobiles and computers

Resource pooling :-
Resources are shared among users

Rapid Elasticity :-
Resources can be increased or decreased whenever they needed

Evolution of cloud computing :-

Main frames :-
Shared large computers

Personal computers :-
computers became smaller and affordable users started performing computing task individually

Client to server computing :-
servers provide services to the client

virtualization :-
one server runs multiple virtual machine

Internet :-
Application become accessible through internet

cloud computing :-
on demand services

Providers such as AWS and

server virtualization and cloud computing :-

* divides one physical server into multiple virtualization machine using a hypervisor

Virtualization	cloud computing
* The Technology	A service cloud
* Creates virtual machines	* Delivers service cloud
* Example : Vmare	example : ex. AWS

role of data centres in delivering cloud services :-

A data centres contains storage and servers, network equipment used to provide cloud services

user → internet → cloud data center → servers → response to users

Functions :-

- runs application
- Stores data and Files
- connects users through networks
- Provides backups and recovery
- Supports increasing the user demands

Evolution of Cloud

- Protects data using security networks

Example:-

AWS data centre, provides cloud services world wide

5 Iaas, Paas, Saas, Xaas :-

Iaas :-

- Infrastructure as a service
- Virtual servers, storage and network
- Amazon EC2

Paas :-

- Platform as a service
- Platforms or tools used to deploy or develop applications in a specified Platforms
- Google App Engine

SaaS:

- Software as a service
- Ready to use any software through the Internet
- Google Docs

XaaS:-

- Anything or Everything as a service Software
- Various IT services delivered through Internet
- Amazon RDS (Database as a service)
